

与传统乳化剂型相比：

- 配方中通过添加纳米油实现的纳米微乳化粒径更小（纳米级）；
- 逸品®纳米油100A可将微乳化粒径稳定在100纳米；
- 最终通过纳米微乳来实现化妆水的水润与滋润兼具的功效。

## 神奇的水中油

源自日本感性工学的纳米微乳技术，在水中浓缩植物油性护肤有效成分，被称为“纳米油(Nanoil)”。突破性的100纳米技术，能将油成分稳定的悬浮在水中，赋予化妆水仙境般白油微光的高雅外观，以及水漾滋润的微乳精华质地。操作工艺简单，将纳米油直接常温加入水相搅拌，即得纳米微乳水。

## 蕴含六种植物精华油

Compared with traditional emulsions:

- The particle size of the nano-microemulsion achieved by adding nano-oil in the formula is smaller;
- HToil\_Nano-100A can stabilize the microemulsion particle size at 100 nanometers;
- Finally, nano-microemulsion is used to achieve the moisturizing effects of the lotion.

### Magical oil in water

The nano-microemulsion technology derived from Japanese Kansei Engineering concentrates plant oil-based skin care active ingredients in water, which is called "Nanoil". The breakthrough 100-nanometer technology can stably suspend the oil in the water, giving the lotion a fairyland-like white turbid and shimmering elegant appearance and a moisturizing microemulsion essence texture. The manufacturing process is very simple, just add the nano-oil is directly added to the water phase and stirred at room temperature to obtain nano-microemulsion.
